

FW9000NN Series

SERVO BALANCE-TYPE LEVEL GAUGE

OUTLINE

FW9000NN Series is the successor to the well received and widely used FW-9000 series for its reliability and variety of long term application.

Using the most of reliable, durable and highly accurate mechanism of FW-9000, **FW9000NN** has become more reliable and user-friendly by introducing up-dated electronics etc (SIL2 compatible).

Consequently, **FW9000NN** has the interchangeability with the current FW-9000 series in terms of installation methods and interfaces with other equipment.

Its noise resistivity and lightening protection performance have been improved significantly.

The intensified automatic self-diagnosis and self-adjustment functions have made **FW9000NN** more user friendly.

Including ATEX certified version intended for use in potentially explosive atmosphere **FW9000NN** is ready to serve world-wide users.

APPLICATIONS

- □ For bonded tanks
- □ For LPG, LNG, Petroleum, Fuels, Water supply and Sewage systems, Chemicals, Power Plants, Food and Beverages.
- □ For versatile applications such as various kinds of liquid measurement, 2-liquids interface, a-point-measurement of liquid density, multi-points measurement of liquid density for profile presentation.

FEATURES

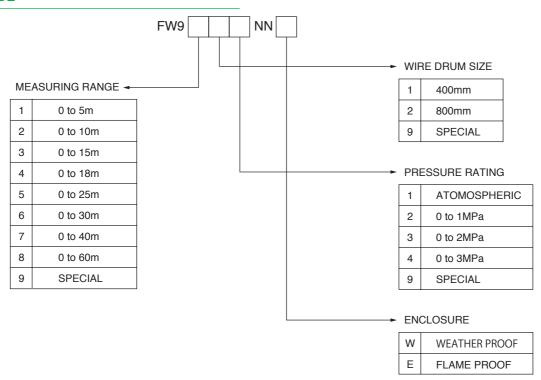

Those items marked as ■ are added or improved features from existing models.

- For bonded tanks
 - The increased noise resistivity and lightening protection assure you reliable operation as complying with superb level 4 or more stipulated in IEC61000-4,5.
 - Protection from direct lightning (Option)
- Having the same dimensions and materials as existing models, FW9000NN is compatible to Japanese explosion-proof requirements and is interchangeable with existing FW-9000 to make replacement easy.
- Parameters can be set without opening housing with 4 magnet sensors attached to the indicating windows.
- Compatible with wide range of power supply from 100 to 240 VAC, 50/60Hz.
- Standardized 2 sizes of measuring drums cover wide measuring ranges from small to gigantic tanks.
- ☐ Complying with RoHS requirements.
- ☐ Eco-friendly low power consumption as small as Max. 25VA.
- ☐ Covers high design pressure up to 3.0 MPa.
- □ Electronic circuits are installed in the electric compartment which is completely isolated from drum compartment.

- Can be connected to the existing spot type and multipoint averaging temperature sensors.
- Precision stepping motor control with micro processor has realized amagingly accurate measurement.
- ☐ Highly reliable operation with powerful self-diagnosis functions (SIL2).
- High durability with non-contact type balancer without using slip ring.
- □ In has addition to the high-speed serial data communication, FW9000NN have various communication tools which are compatible to TOKYO KEISO's existing well-established transmitters. Therefore, FW-9000NN serves with ease for your renovation and replacement of the existing tank monitoring system.
- In combination with DIR110NN series, Max. 6 contact signals transmitted between field and control room. Monitoring and control of equipments around the tank yard are also possible in addition to liquid level measurement.
- 4 to 20 mA signals such as pressure signal can be digitalized and retransmitted.
- □ Analog 4 to 20mA signals such as level and temperature can be output additionally to meet with high speed data processing carried by host computers.

MODEL CODE

OPERATING PRINCIPLE

A very thin measuring wire B is wound onto measuring drum C having 400 mm/r or 800 mm/r precisely machined spiral groove.

Measuring drum C is connected to Driving shaft F through magnet coupling D, E and rotates forward and backward according to movement of gear-down unit J, K and stepping motor N. A worm gear J, which is located on the same axis as Driving shaft F, is connected to Driving shaft F through Spring I.

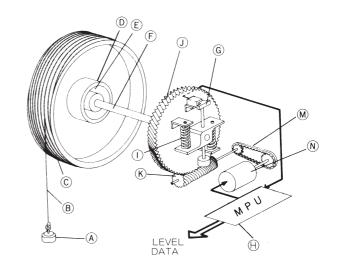

By this arrangement, tension onto Measuring wire B can be precisely detected by measuring distortion of Spring I by Balancer G. A Displacer A, of which density is higher than that of liquid to be measured, is connected to one end of Measuring wire B. The weight of Displacer A always gives downforce tension to Driving shaft F. In normal measurement condition, Stepping motor N is controlled by signal from Balancer G to give Measuring wire B a slightly less and constant tension than the weight of Displacer A. In this way, Displacer A always follows liquid surface with stable draft line.

Thus, rotating angle of Measuring drum C which corresponds to length of unwound Measuring wire B represents height of liquid in tank.

By adjusting the control level of tension T onto measuring wire B, interface of two liquids having different density can also be measured. Also, by sinking displacer into liquid and measuring the tension T onto measuring wire B, the liquid density can be detected and measured.

In FW9000NN, signal from Balancer G is fully digitalized. Stepping motor N, having high resolution, is controlled by Microprocessor unit H. This digitalized servo operation system offers high liquid following capability and stability in operation compared to existing analog control method.

The angle of Measuring drum rotation is obtained from the number of steps of Stepping Motor N. This remarkably improves the resolution of liquid level measurement of 0.025 mm.

STANDARD SPECIFICATION

Mechanical specification

Liquid level detection: Digitally controlled balancing servo con-

sisting of small size displacer, measuring

1) Liquid level mea

wire and wire drum

● Displacer : Dia. ø140, ø110, ø90, ø70, ø50, ø30

Mass 250g (Standard)

Material SUS304, SUS316, SUS316L, MA (Equiv. to Hastelloy*), PTFE, others

● Measuring wire : Standard SUS316 (Ø0.2, single)

Option *1 MA (Equiv. to Hastelloy)

(ø0.3, single) FEP covered

(ø0.6, stranded core)

*1 Small type wire drum may be unable to be used in case of measuring wires other than standard (ø0.2) even in short measuring

range. Consult factory for details.

●Wire drum size : 400 mm/r (FW9□1□NN□)

800 mm/r (FW9□2□NN□)

● Tension detection : By using perfect Non-contact magnetic

field response type Hall element sensor

• Driving motor : High resolution type stepping motor

● Drive shaft sealing : Strong magnet coupling

Measuring range 0~5m (FW91□□NN□) *2
 0~10m (FW92□□NN□) *2

*2 0~15m (FW93□□NN□) *2 0~18m *2 (FW94□□NN□) *2 0~25m (FW95□□NN□) 0~30m (FW96□□NN□) *2 0~40m (FW97□□NN□) *3 0~60m (FW98□□NN□) *3 *3 (FW99□□NN□) Special

*2 Small size drum (400 mm/r, FW9□1□NN□) or large size drum (800 mm/r, FW9□2□NN□) is applicable.

*3 Large size drum (800 mm/r, FW9\(\sigma 2\subseteq NN\subsete\)) is applicable.

●Temp. range

: Liquid -200 to +300°C Ambient -40 (-20 to + 55°C TIIS)

(Temperature of main body)

Under the conditions where, the liquid and the moisture inside the wire drum room shall not freeze over, nor adhere.

*Not suitable for the use environment where the mass of displacer changes by the at-

tachment of liquid.

Operating pressure :

Prees.	Op. press. (MPa)	MODEL	Material of pressurized part	
Low press.	ATM	FW9□□1NN□	AC2A, SCS13, SCS14	
High press.	0 ~ 1	FW9□□2NN□	SCS13, SCS14	
	0 ~ 2	FW9□□3NN□	SCS13, SCS14	
	0~3	FW9□□4NN□	SCS13, SCS14	

Accuracy* (Indication and digital output) :

1) Liquid level measurement

±0.4mm (Refer to factory for ditail)

2) Interface measurement

in case of density difference of 0.2 g/cm³

± (2.7) mm

3) Density measurement

 $\pm 0.005 g/cm^3$

* Under reference conditions.

Process connection : Flange

Flange size 3", 4", 5", 6"or other specials

(Horizontal movement of displacer for tank height shall be considered for decision of

flange size)

Flange rating JIS5K/10K/20K/30KRF,

ANSI 150/300, JPI 150/300, Others

Displacer guiding : Standard : By stand pipe

Option : Non guide *4

By guide wire *4 Special *4

Δа

3

*4 : Specified accuracy not applicable. Consult

factory for further details.

Displacer horizontal movement :

For small size drum

(400 mm/r, FW9□1□NN□) for 1 m liquid level movement

Δa= 2.5mm, 1.9mm, 1.4mm, 1.125mm

For large size drum

(800 mm/r, FW9□2□NN□)
for 1 m liquid level movement

Δa= 1.25mm, 0.95mm, 0.7mm,

0.57mm

● Construction : Weather proof (FW9□□□NNW) or

Flameproof ExdIICT6 (FW9 NNE) (TIIS certification No. TC14583)

Protection class : IEC60529 (JIS C0920) IP66/67

● Functional Safety : SIL2 (IEC 61508)

ELECTRONICS AND SOFTWARE SPECIFICATION

Signal

1) External input

Besides normal level measurement by FW9000NN, the following external devices can be connected to FW9000NN. Data from such external instruments are digitalized and transferred to control room through serial data signal:

a. Temperature sensors

(Temperature conversion range :-200 to +320°C)

- 1) Pt100 Ω spot temp. sensor (TS type of Tokyo Keiso or equivalent)
- Average temp. sensor (ATM type of Tokyo Keiso or equivalent)
- Multi-spot average temp, sensor (ATS type of Tokyo Keiso or equivalent)

b. Analog signal

4 to 20mA, 1 point (Input resistance 250 Ω)

2) External output

- a. Serial communication signal for receiver in for remote control room, Refer to ♦ COMMUNICATION FUNCTION for further details.)
- b. Serial data coded output for explosion-proof tank side receiver (Electric)

c. Contact output

Number of contacts: 2

: SPST(1a or 1b) Configuration

d. Analog output

4 to 20 mADC ×2 (Level and Temperature)

conversion accuracy ± 0.5% F.S.

HART (Ver.7) available for either one channel.

Alarm monitoring :
 2 Points of liquid level alarms or temperature alarms

Max.6 points when tank side indicator (DIR110NN series) is used. When input signals exceed set points:

- 1) Specified alarm message is indicated on LCD.
- Specified bit of serial output is "ON"
- 3) Assigned open collector output is actuated.
- Control and parameter setting :

All parameters can be set by the following procedures:

- 1) Dialogue type setting with magnetic sensor on indicator using Arrow mark.
 - The registered password allows parameter settings for security reason.
 - (Control and parameter setting are possible without opening housing cover with power "ON".)
- 2) Parameters are presettable through 2-way data communication from remote control room.
- 3) Dialogue type setting by tank side indicator (DIR-110N)
- Contents of control:

Liquid level, liquid interface, density. hoisting, lowering, stoppage

Contents of parameter setting

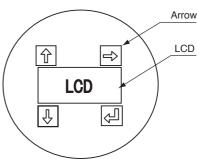

Hoisting (Maximum, Minimum), Adjustment of level indication, Displacer response PID, Alarm set point / Reset span / Alarm action / Relay allotment (Level, Temperature), Connection thermometer classification, Point changing of temperature element, Type of external input, etc.

Self-diagnostis function

INSTALLATION

Following examples show how to install the instruments on cone-roof tank, floating roof tank and sphere tank using stand pipes.

COMMUNICATION FUNCTION

Avarious kinds of communication are available for FW-9000NN as shown below SUPER INTELLIGENT TANK GAUGE:

1) STANDARD OUTPUT FORMAT OF FW-9000N

Transmission type 2 way-2 wire serial data transmission

Baud rate 2400 bps

Topology Bus line wiring (16 tanks/BUS)

Distance Max.5 km

(Wiring condition: wiring resistance 20 Ω/

one way capacitance 0.5 μ F/m)

2) COMPATIBLE FORMATS FOR TOKYO KEISO'S EXISTING TANK DATE TRANSMITTERS

a. DM-II type

b. DB-M type

c. DM type

d. FW-7000 series

3) Other serial communications

a. RS-485 MODBUS

Transmission type: RS-485 (2-wire)
Baud rate : 2400/4800/9600bps

Distance : 1.2km
b. FOUNDATION Field bus
Base corrent : max 18mA

I/O signal : IEC 61158-2 compatible
Protocol : FOUNDATION Field bus H1

H1 Profile class : 31PS, 32L H1 Device class : Link Master Function block : 1-RB2, 1AI, 1TB

c. TRL/2 compatible

*Field bus communication of Rosemount

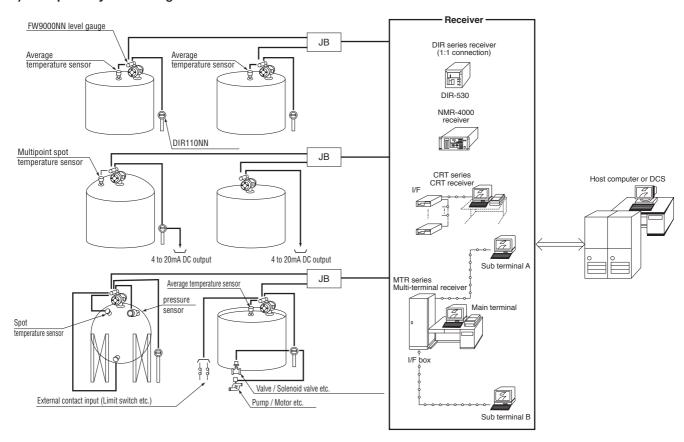

d. V1 compatible

*Field bus communication of E+H
