

OUTLINE

By directly mounting a differential pressure transmitter on the differential- pressure type V-Cone flow sensor the **Integral V-Cone flowmeter** is a compact flowmeter which requires no pressure lead piping and saves much of installation cost.

The V-Cone flowmeter has a V-Cone shaped throttling device developed based on actual fluid experiments. It features self-reshaping the flow profile, stable differential pressure and self-draining.

FEATURES

- **Wide range of applications**
It measures gases, liquids and steam for wide range of application.
- **Short straight runs**
The Required straight runs are less than 1/5 of those required for orifices and vortex flowmeters. The narrow installation space allows simple and flexible piping arrangement to save space and cost.
- **Stable differential pressure signal**
The secondary pressure is measured at the center of the cone, which makes the differential pressure signal stable at as low as 0.025kPa.
- **Wide Rangeability**
Since the differential pressure created by the meter is stable at low flow rate it can measure the flow rate in the range of the turn down ratio 14:1 to cover the wide flow range with the standard differential pressure.
- **Low pressure loss**
The stable measurement at low differential pressure allows low pressure loss which improves energy efficiency of the plant.
- **High reliability**
V-Cone shape has durable structure against wear or adhesion without moving parts. It assures you a long reliable operation without maintenance.

MEASUREMENT PRINCIPLE

The principle of V-Cone flowmeter is the same as that of a common differential pressure type flowmeter, and it is based on the Bernoulli's theorem of the conservation of a fluid energy.

As shown in Fig.1, the pressure P_1 at the approaching point to V-Cone decreases to P_2 at the edge point with increasing fluid velocity by throttling the flow path along the contoured shape of V-Cone. P_1 and P_2 are measured from the pressure taps and the difference of the two pressures is given as:

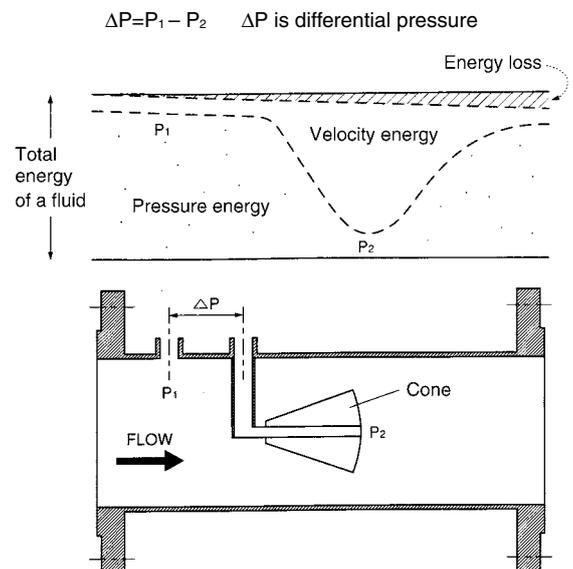

Fig. 1

The following formula explains the relation of flow rate and differential pressure.

$$Q = \frac{3600 \times \pi \times \sqrt{2} \times \beta^2 \times D^2 \times Cd \times \sqrt{\Delta P \times 1000} \times Y}{4 \times \sqrt{\rho} \times \sqrt{(1-\beta^4)}}$$

- Q : Flow rate [m³/h]
- β : Beta ratio
- D : Inside diameter [m]
- Cd : Discharge coefficient
- ΔP : Differential pressure [kPa]
- ρ : Density [kg/m³]

- Y : Gas expansion factor
Y=1-(0.649+0.696×β⁴) × ΔP / (k × P)
- k : Specific heat ratio
- P : Line pressure [kPa]

STANDARD SPECIFICATIONS

- Size : 15mm (1/2inch) to 300mm (12inch)
- Material
 - Body, flange, lead pipe : Stainless steel 304
 - Differential pressure transmitter
 - Diaphragm : SUS316L
 - Other wet parts : SUS316 and PTFE
 - Case and cover : Aluminum alloy
 - 3 valve manifold : SUS316
 - Seal of lead pipe parts : PTFE
 - Sealing liquid of transmitter : Silicone oil
- Process connection : Flanges
JIS 10K RF or ASME Class 150 RF
- Beta ratio : 0.45, 0.50, 0.55, 0.60, 0.65, 0.70, 0.75, 0.80

Fluid temperature and Maximum allowable pressure

Fluids		Steam	Liquid	Gas
Fluid Temperature °C	General type	Max. 190	-40 to 120	-40 to 120
	Flameproof enclosure	Max. 190	-20 to 120	-20 to 120
Maximum allowable pressure MPa		Max. 1.0	Max. 1.4	-0.05 to 0.99

- Ambient temperature
 - General type : -20 to 80°C
 - Flameproof enclosure : -20 to 60°C

Storage temperature : -40 to 90°C

- Accuracy : ±1.5% of Max. flow rate
- Guaranteed Rangeability : 14:1 as standard
- Reynolds No. : ≥ 8000
- Diff. pressure : ≥ 0.025 kPa for gas and liquid
: ≥ 0.05 kPa for steam

Power supply : 10.5 to 45VDC

Output signal : 4 to 20mADC 2-wire

Maximum load : 600Ω at supply voltage 24VDC

● Required straight runs

A [Measuring fluid : Liquids general, both gases and steam with Reynolds No. ≤200,000]

Joins or other obstacles	Upstream	Downstream
1 piece of 90° bend	0D	0D
2 pieces of 90° bend	0D	0D
T joint	0D	0D
Butterfly valve (Flow control valve)	*1	1D
Butterfly valve (Full open)	2D	0D
Gate valve (Full open) or full port ballvalve (Full open)	0D	0D
Expander (Diameter 0.67D expands to 1D, length 2.5D)	2D	1D
Reducer (Diameter 3D reduces to 1D, length 3.5D)	0D	0D

*1: not recommended

B [Measuring fluid : Both Gases and steam with Reynolds No.> 200,000]

Joins or other obstacles	Upstream	Downstream
1 piece of 90° bend	1D	1D
2 pieces of 90° bend	1D	1D
T joint	1D	1D
Butterfly valve (Flow control valve)	*1	1D
Butterfly valve (Full open)	2D	1D
Gate valve (Full open) or full port ballvalve (Full open)	1D	1D
Expander (Diameter 0.67D expands to 1D, length 2.5D)	2D	1D
Reducer (Diameter 3D reduces to 1D, length 3.5D)	0D	0D

*1: not recommended

[Notes]

- D shows the nominal size of V-Cone flowmeter.
- The required straight runs are the distance from the flange faces of V-Cone flowmeter.
- Add 1D to the above mentioned figures for the service β ratio is 0.70 or more.

Differential pressure transmitter

- Flow indication : Digital indication with unit scale on 5 digits LCD
- Enclosure : IP67/JIS C 0920 (equivalent to IEC IP67, NEMA 6/6P)
- Explosionproof : TIIS : Ex do IIB+H₂ T4 (JIS Flameproof type)
Ambient temperature = Max.+60°C
Fluid temperature = Max.+120°C
- Cable connection : G1/2
Use attached explosion proof packing type cable gland suitable for the cable of 11mm outside diameter for the cable connection of the TIIS flameproof construction.
- Connection terminals : M3.5 Screws
- Painting : Polyester resin painting
- Color : Silver case and blue case cover

REMARKS

- Flow rates shown in the each table indicate the maximum flow rate range in which the accuracy is guaranteed at each size and at prescribed pressure or density. The minimum flow rate within the range of which the accuracy is guaranteed is 1/14 of the maximum flow rate with the exceptions of figures in parenthesis as noted.

- Contact TOKYO KEISO Co., Ltd. for the detail information about sizing.

*1 Accuracy guaranteed flow range is 9 : 1.

*2 Accuracy guaranteed flow range is 10 : 1.

- Maximum flow rate range at measuring air at 20°C and following pressure
