

OUTLINE

SWIRLMAX[®] is a 2-wire, all-in-one type vortex flowmeter with temperature and pressure sensors.

The VFM4200C can easily correct flow measurements of steam and gases for temperature and pressure. There is no need for additional sensors and correctors.

The VFM4200C is ideal for managing the energy of steam and gases.

FEATURES

- ❑ Measuring various fluids
Steam, gases, and liquids
- ❑ Flow correction for saturated steam by temperature as standard
The VFM4200C contains a temperature sensor and stores a table of saturated steam density in the amplifier.
The flowmeter measures the flow rate of saturated steam, corrects it by temperature, and outputs the result. It is easy to measure the mass flow rate of saturated steam.
- ❑ Optional pressure sensor
A pressure sensor can be mounted as an option. The VFM4200C can easily correct flow measurements of steam and gases by temperature and pressure. There is no need for additional sensors and correctors.
- ❑ Corrosion-resistant all-stainless-steel construction
All wetted parts are made of welded stainless steel and are robust, with excellent corrosion and heat resistance.
- ❑ Reduced diameters available for flange type
Flange type flowmeters with reduced meter sizes are available for measuring low flow rates.
The diameter can be reduced by up to two steps from the connection size.
- ❑ Advanced vortex frequency detection (AVFD) ensures stable reading
The original AVFD technology eliminates external disturbances and ensures stable, reliable readings.
- ❑ Robust construction
Robust, maintenance-free construction with no moving parts

OPERATING PRINCIPLE

An object in a flow generates alternating vortices (Karman vortices) on both sides of the object in the downstream, and the frequency of the vortices is proportional to the flow velocity.

The VFM4200C measures this frequency with a piezoelectric element in the vortex detector, converts it into flow rate signals, and outputs them. The vortex detector is equipped with a temperature sensor (Pt1000 RTD), which measures fluid temperature and corrects the flow rate of saturated steam by temperature.

With an optional pressure sensor mounted, the flowmeter can correct the flow rate of gases and superheated steam by temperature and pressure.

$$f = (S \times v) / b$$

f : Vortex frequency S : Constant of proportion (Strouhal number)
v : Flow velocity b : Width of bluff body

STANDARD SPECIFICATIONS

General Specifications

- Meter size
 - Flange type : 15, 25, 40, 50, 80, 100, 150, 200, 250, and 300 mm
 - Wafer type : 15, 25, 40, 50, 80, and 100 mm
- Protection class : IP66/67 (IEC 60529)
- Ambient temperature : -40 to +85°C
* Refer to "Explosionproof Specifications" for ATEX explosionproof products.

Fluid Specifications

- Measured fluid : Gas, steam, and liquid
- Temperature : -40 to +240°C
* Refer to "Explosionproof Specifications" for ATEX explosion proof products.
- Pressure : Up to flange rating (max. 10 MPa)
- Viscosity : Up to 10 mPa·s
- Reynolds number (Re) : 10,000 or higher

Sensor Specifications

- Wetted parts material : Stainless steel (316L)
[Metering tube, flange, vortex detector, and gasket for vortex detector]
- Process connection : Flange or wafer (inserted between pipe flanges)
- Flange : JIS10K/20K
ASME class 150/300/600
- Temperature sensor : Built-in Pt1000 RTD (standard)
- Pressure sensor : Pressure sensor integrated (optional)

Converter Specifications

- Housing material : Aluminum alloy
- Painting : Siloxane coating
- Color : Gray (converter housing)
Jade green (converter cover)
- Cable entry : G1/2 female, 1/2 NPT female, or M20 watertight gland
- Power supply : 24 V DC (12 to 36 V DC)
* Refer to "Explosionproof Specifications" for ATEX explosionproof products.
- Display : LCD
2 screens can be alternated, up to 3 lines on each screen
Selectable among flow rate, total flow, temperature, flow velocity, vortex frequency, and pressure (optional)
- Output
 - Current output
 - Output : 2-wire, 4-20 mA DC
 - Allowable load resistance : $R=(E-12) / 0.022\Omega$ (E=Power voltage (V))
 - Contact output
 - Output : Selectable among pulse output, frequency output, status output, and limit switch
 - Output type : Open collector (normally closed) or NAMUR output
 - Pulse rate : Max. 1,000 Hz (pulse output and frequency output)
 - Pulse width : 0.5 to 2,000 ms
 - Load rating : Max. 36 V DC, 100 mA (open collector output)
* Refer to "Explosionproof Specifications" for ATEX explosionproof products.
- Flow rate correction function : Flow correction of saturated steam by temperature (standard)
Flow correction of superheated steam and gas by temperature and pressure (optional)

- HART communication : HART7 (standard)
- Damping time constant (63% response) : 0 to 100 s (variable)
- Test function : Simulated current output and contact output
- Burnout : Either 22 mA or 3.55 mA can be output at error

Accuracy (under standard conditions)

- $Re \geq 20,000$: $\pm 0.75\%$ of reading (liquid)
 $\pm 1\%$ of reading (gas and steam)
- $10,000 < Re < 20,000$: $\pm 2\%$ of reading (liquid, gas, and steam)

[When corrected by temperature and pressure]

- $Re \geq 20,000$: $\pm 1.5\%$ of reading (gas and steam)
- $10,000 < Re < 20,000$: $\pm 2.5\%$ of reading (gas and steam)

* These values are display accuracy.

* Add $\pm 0.1\%$ of full scale to these values to obtain current output accuracy.

- Repeatability : $\pm 0.1\%$

Explosionproof Specifications

- ATEX : II 2G Ex db ia IIC T6...T2 Gb
II 2G Ex ia IIC T6...T2 Gb

* For further details, refer to "Explosionproof Specifications" on pages 11 and 12.

Measurable Flow Rate Range

- Measurable minimum and maximum flow velocities

[ρ : Fluid density (unit: kg/m³)]

	Min. velocity	Max. velocity
Liquid	The largest value among: • $0.5 \times (998/\rho)^{0.5}$ • Flow velocity when Re is 10,000 • 0.3 m/s	The smallest value among: • $7 \times (998/\rho)^{0.47}$ • 10 m/s
Gas, steam	The largest value among: • $6 \times (1.204/\rho)^{0.5}$ • Flow velocity when Re is 10,000 • 2 m/s (3 m/s for 15-mm meter size)	The smallest value among: • $7 \times (998/\rho)^{0.47}$ • 80 m/s (45 m/s for 15-mm meter size, 70 m/s for 25-mm meter size)

- Measurable flow rate range for water

[Temperature: 20°C]

Meter size	Flow rate range (m ³ /h)
15	(0.46) 0.91 to 5.04
25	(0.82) 1.36 to 11.3
40	(2.05) 2.15 to 28.4
50	3.54 to 49.2
80	7.75 to 107
100	13.4 to 185
150	30.2 to 419
200	56.7 to 787
250	90.5 to 1260
300	128 to 1772

Note: Values in parentheses are the minimum flow rates at an accuracy of $\pm 2.0\%$.

Other values are the minimum and the maximum flow rates at an accuracy of $\pm 0.75\%$.

Other values are the minimum and the maximum flow rates at an accuracy of $\pm 1.0\%$ ($\pm 1.5\%$ when corrected by temperature and pressure).

PRESSURE LOSS

$$\Delta P = C \times \rho \times 10^{-4}$$

ΔP : Pressure loss [kPa]
 ρ : Density [kg/m³]

$$\Delta P = C \times \rho \times 10^{-4}$$

ΔP : Pressure loss [kPa]
 ρ : Density [kg/m³]

Note: The pressure loss values shown above are when the meter size is equal to the connection size.
 If you need to know the pressure loss of reduced types (the meter size is smaller than the connection size), please contact us or your local representative.

MOUNTING DIRECTION OF CONVERTER AND DISPLAY

● Without pressure sensor

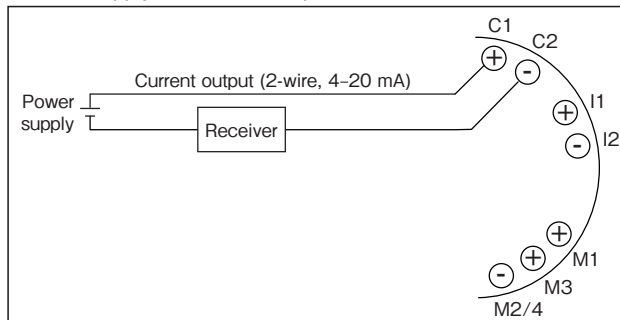

● With pressure sensor

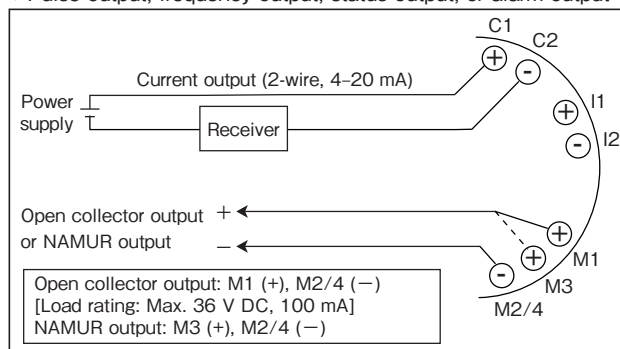

WIRING

● Power supply and current output

● Pulse output, frequency output, status output, or alarm output

● When used as an intrinsically safe apparatus

STANDARD ACCESSORIES

- Centering ring: 2 (only for wafer type)
- Magnet for setting data: 1
- Tool for removing the converter cover
- Tool for dismantling the display
- Setting data sheet: 1
- Instruction manual: 1

OPTIONS

- G1/2 watertight glands for cable entry: 1 set [symbol: WG]
 - No presetting of converter data (parameters) [symbol: NS]
- The flowmeter is delivered with the standard setting.
Please set a flow rate range and other data necessary for operation.

ORDERING INSTRUCTIONS

1. Model and specification code
Example:
Model: VFM4200C
Spec code: VG16412MM20001012010000000003
 2. Full-scale flow rate (unnecessary when the option NS is specified)
 3. Mounting direction of the converter and the display (version A, B, C, or D: Refer to the top of this page.)
 4. Options (Specify if necessary.)
Specify the symbol with reference to [OPTIONS].
 5. Name, temperature, pressure, density, and viscosity of measured fluid
- Install safety barriers when the VFM4200C is used as an intrinsically safe apparatus.
 - Observe the requirements of the safety barrier.
 - When an isolation barrier is used, ensure that the power supply meets the requirements of the barrier.

Explosionproof specifications	0														Standard (non-ex)	○	
	1														ATEX (flameproof)		
	2														ATEX (intrinsically safe)		
Housing material	1													Aluminum alloy	○		
Type	0														Integrated type	○	
Display	1														LCD	○	
Cable entry	2														2 × M20 (with watertight cable gland)	○	
	8														2 × M20 (only for flameproof type)		
	K														2 × 1/2" NPT		
	N														2 × G1/2		
Version	0														For Gas and Liquid without correction. For Saturated steam with temperature correction.	○	
	2														For Gas and Superheated steam with temperature and pressure correction. *3		
Fixed code														10000000003	Always 10000000003	○	
Special specification															Blank Without	○	
															/ Z With special request *4		

*1 Fluorocarbon rubber

*2 Perfluoroelastomer

*3 Selectable if with pressure sensor.

*4 Special requirements not included in the above coding system should be designated by adding "/Z" at the end of the code. Please describe the content separately.

REQUIRED LENGTH OF STRAIGHT RUN

< Upstream >

Arrangement	Required length of straight run
One reducer	
One elbow	
Two elbows in the same plane	
Two elbows in different planes	
Control valve	
Fully-opened gate valve	

Note: D means the connection size.

< Downstream >

Arrangement	Required length of straight run
One elbow, control valve, or reducer	
Measuring tap	

Note: D means the connection size.

Explosionproof Specifications

- ATEX (intrinsically safe)

Model : VFM4200C
 Type of protection and class : II 2 G Ex ia IIC T6...T2 Gb
 Ambient temperature : -40°C to a value in the table below
 Fluid temperature : -40°C to a value in the table below

< When the converter is above the sensor >

[°C]	Temperature class								
	T6	T5	T4	T3			T2		
Ambient temperature	40	60	65	40	60	65	40	60	65
Meter size	Max. fluid temperature								
15 mm, 25 mm	85	65	135	200	200	185	240	210	185
40 mm, 50 mm	75	65	135	200	195	165	240	195	165
80 mm, 100 mm	70	65	135	200	165	145	240	165	145
150 mm to 300 mm	80	65	135	200	200	170	240	200	170

< When the converter is at the same level as or below the sensor >

[°C]	Temperature class				
	T6	T5	T4	T3	T2
Ambient temperature	40	60	65	65	65
Meter size	Max. fluid temperature				
15mm, 25mm	85	90	135	200	240
40mm, 50mm	85	80	135	200	240
80mm, 100mm	85	75	135	200	240
150mm to 300mm	85	80	135	200	240

Intrinsically safe circuit rating:

Power supply and current output (terminals C1 and C2)
 Maximum voltage for intrinsically safe circuit (Ui) = 30 V
 Maximum current for intrinsically safe circuit (Ii) = 130 mA
 Maximum power for intrinsically safe circuit (Pi) = 1 W
 Internal capacitance (Ci) = 10 nF
 Internal inductance (Li): Negligibly small

Contact output (terminals M1 and M2/M4 or M3 and M2/M4)
 Maximum voltage for intrinsically safe circuit (Ui) = 30 V
 Maximum current for intrinsically safe circuit (Ii) = 100 mA
 Maximum power for intrinsically safe circuit (Pi) = 1 W
 Internal capacitance (Ci) = 10 nF
 Internal inductance (Li): Negligibly small

Current input (terminals I1 and I2)
 Maximum voltage for intrinsically safe circuit (Ui) = 30 V
 Maximum current for intrinsically safe circuit (Ii) = 130 mA
 Maximum power for intrinsically safe circuit (Pi) = 1 W
 Internal capacitance (Ci) = 10 nF
 Internal inductance (Li): Negligibly small

To enable this product to work as an intrinsically safe apparatus, safety barriers must be installed in the 2-wire loop in a non-hazardous area. A barrier is required for each of the terminals for power supply and current output; contact output; and current input, if these are used.

Recommended barriers (optional)

- For power supply and current output: KFD2-STC4-Ex1 intrinsically safe isolation barrier (Pepperl+Fuchs)
- For contact output and current input: Z728 intrinsically safe Zener barrier (Pepperl+Fuchs)

* Use heat-resistant cables (at least 80°C rating) for wiring.

Electrical ratings:

Power supply and current output (terminals C1 and C2)

Voltage = 12 to 32 V DC

Current = 4 to 20 mA

Contact output, open collector output (terminals M1 and M2/M4)

Voltage = 8 to 32 V DC

Current = 100 mA or lower

Contact output, NAMUR output (terminals M3 and M2/M4)

Voltage = 8 V DC

Current = 1 mA or 3 mA

Current input (terminals I1 and I2)

Voltage = 9 to 32 V DC

Current = 0 to 20 mA

* Specification is subject to change without notice.
