

# TECHNICAL GUIDANCE

Mass flow measurement for saturated steam and gases

## VM Series

### MASS V-CONE FLOWMETER

#### OUTLINE

The **Mass V-Cone flowmeter** with a differential pressure type flow element V-Cone, is equipped with a differential pressure transmitter with density compensator. The **Mass V-Cone flowmeter** can measure the mass flow of saturated steam and gases without a separate pressure transmitter. The optional multi-functional converter transmits the pressure and temperature signals for further application for gas services.

The V-Cone flowmeter has a V-Cone shaped throttling device developed based on actual fluid experiments. It features self-reshaping the flow profile, stable differential pressure and self-draining.

#### FEATURES

- Convenient mass flow rate measurement

Measuring pressure at the same time, the direct mounted differential pressure transmitter can measure the mass flow rate with a loaded compensating function of saturated steam and gas density. The separate input from a RTD (Resistance type temperature detector) allows the temperature and pressure compensation of gas flow.

- Short straight runs

The Required straight runs are less than 1/5 of those required for orifices and vortex flowmeters. The narrow installation space allows simple and flexible piping arrangement to save space and cost.

- Stable differential pressure signal

The secondary pressure is measured at the center of the cone, which makes the differential pressure signal stable at as low as 0.025kPa.

- Wide Rangeability

Since the differential pressure created by the meter is stable at low flow rate it can measure the flow rate in the range of the turn down ratio 10:1 to cover the wide flow range with the standard differential pressure.

- Low pressure loss

The stable measurement at low differential pressure allows low pressure loss which improves energy efficiency of the plant.

- High reliability

V-Cone shape has durable structure against wear or adhesion without moving parts. It assures you a long reliable operation without maintenance.

#### MEASUREMENT PRINCIPLE

The principle of V-Cone flowmeter is the same as that of a common differential pressure type flowmeter, and it is based on the Bernoulli's theorem of the conservation of a fluid energy.

As shown in Fig.1, the pressure  $P_1$  at the approaching point to V-Cone decreases to  $P_2$  at the edge point with increasing fluid velocity by throttling the flow path along the contoured shape of V-Cone.  $P_1$  and  $P_2$  are measured from the pressure taps and the difference of the two pressures is given as:

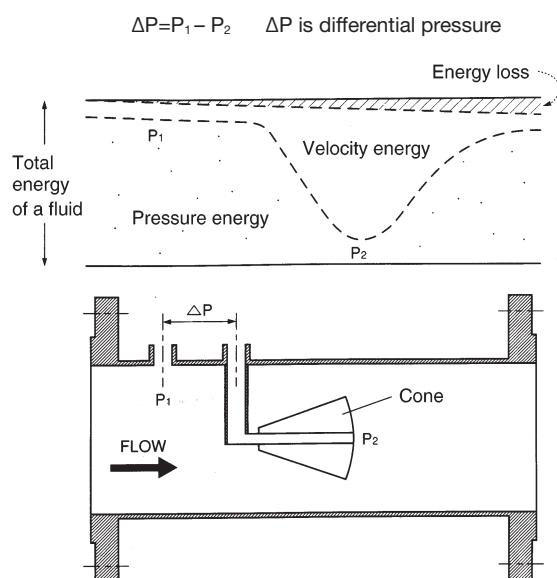

Fig. 1

The following formula explains the relation of flow rate and differential pressure.

$$Q = \frac{3600 \times \pi \times \sqrt{2} \times \beta^2 \times D^2 \times Cd \times \sqrt{\Delta P \times 1000} \times Y}{4 \times \sqrt{\rho} \times \sqrt{(1-\beta^4)}}$$

$Q$  : Flow rate [m<sup>3</sup>/h]

$\beta$  : Beta ratio

D : Inside diameter [m]

Cd : Discharge coefficient

$\Delta P$  : Differential pressure [kPa]

$\rho$  : Density [kg/m<sup>3</sup>]

Y : Gas expansion factor

$$Y=1-(0.649+0.696\times\beta^4)\times\Delta P/(k\times P)$$

k : Specific heat ratio

P : Line pressure [kPa]

- Required straight runs

A [Measuring fluid : Gases and saturated steam with Reynolds No.  $\leq 200,000$ ]

Joints or other obstacles	Upstream	Downstream
1 piece of 90° bend	0D	0D
2 pieces of 90° bend	0D	0D
T joint	0D	0D
Butterfly valve (Flow control valve)	*1	1D
Butterfly valve (Full open)	2D	0D
Gate valve (Full open) or full port ballvalve (Full open)	0D	0D
Expander (Diameter 0.67D expands to 1D, length 2.5D)	2D	1D
Reducer (Diameter 3D reduces to 1D, length 3.5D)	0D	0D

\*1: not recommended

B [Measuring fluid : Both Gases and saturated steam with Reynolds No.  $>200,000$ ]

Joints or other obstacles	Upstream	Downstream
1 piece of 90° bend	1D	1D
2 pieces of 90° bend	1D	1D
T joint	1D	1D
Butterfly valve (Flow control valve)	*1	1D
Butterfly valve (Full open)	2D	1D
Gate valve (Full open) or full port ballvalve (Full open)	1D	1D
Expander (Diameter 0.67D expands to 1D, length 2.5D)	2D	1D
Reducer (Diameter 3D reduces to 1D, length 3.5D)	0D	0D

\*1: not recommended

#### [Notes]

- D shows the nominal size of V-Cone flowmeter.
- The required straight runs are the distance from the flange faces of V-Cone flowmeter.
- Add 1D to the above mentioned figures for the service  $\beta$  ratio is 0.70 or more.

#### Differential pressure transmitter

Flow indication : Digital indication with unit scale on 5 digits LCD

Enclosure : IP67/ JIS C 0920

Explosionproof : TIIS : Exd IIC T4 Gb (Explosion proof)

Cable connection : G1/2 2 pieces  
Use an explosion proof packing type cable gland X-SFRCA for the cable connection of the TIIS flameproof construction.

Painting : Acid proof painting and light gray

Temperature input : Pt100Ω or JPt100Ω 3-wire system required for temperature compensation of gas measurement.

## STANDARD SPECIFICATIONS

Size	: 15mm (1/2inch) to 300mm (12inch)
Measuring fluids	: Gases, Saturated steam
Material	
Body, flange, lead pipe	: Stainless steel 304
Differential pressure transmitter	
Diaphragm	: SUS316L
Other wet parts	: Equivalent to SUS316L
Case and cover	: Aluminum alloy
3 valve manifold	: Body ; Equivalent to SUS316L Seal ; PTFE
Seal of lead pipe parts	: PTFE
Sealing liquid of transmitter	: Silicone oil
Process connection	: Flanges JIS 10K RF or ASME Class 150 RF
Beta ratio	: 0.45, 0.50, 0.55, 0.60, 0.65, 0.70, 0.75, 0.80

#### Fluid temperature and Maximum allowable pressure

Fluids	Saturated steam	Gas
Temperature °C	General type	Max.190
	Flameproof enclosure	Max.190
Maximum allowable pressure MPa	Max.1.0	-0.05 to 0.99

Ambient temperature General type : -40 to 85°C  
Flameproof enclosure : -20 to 55°C

Storage temperature and humidity : -40 to 85°C  
0 to 100%RH

Accuracy : ±2% of Max. flow rate

Guaranteed Rangeability : 10:1 as standard

Reynolds No. :  $\geq 8000$

Differential pressure

:  $\geq 0.025$  kPa for gas

:  $\geq 0.05$  kPa for saturated steam

Power supply : 11.4 to 42.0VDC

Output signal : 4 to 20mAADC 2-wire

Maximum load : 600Ω at supply voltage 24VDC

## COMPENSATION EQUATION

(1) Gas      
$$Q \left[ \text{m}^3/\text{h}(nor) \right] = Q_{\text{MAX}} \times \sqrt{\frac{273.15+T_B}{273.15+T_I} \times \frac{P_I}{P_B} \times \frac{\Delta P}{\Delta P_{\text{MAX}}}}$$

(2) Saturated steam      
$$Q \left[ \text{kg}/\text{h} \right] = Q_{\text{MAX}} \times \sqrt{\frac{\rho_I}{\rho_B} \times \frac{\Delta P}{\Delta P_{\text{MAX}}}}$$

$Q$  : Compensated flow rate  
 $Q_{\text{MAX}}$  : Maximum flow rate  
 $T_I$  : Actual gas temperature [°C]  
 $T_B$  : Temperature at design condition [°C]  
 $P_I$  : Actual gas pressure [MPa(abs)]  
 $P_B$  : Pressure at design condition [MPa(abs)]  
 $\rho_I$  : Density of saturated steam at actual measurement [kg/m³]  
 $\rho_B$  : Density of saturated steam at design condition [kg/m³]  
 $\Delta P$  : Measured differential pressure [kPa]  
 $\Delta P_{\text{MAX}}$  : Differential pressure at maximum flow rate [kPa]

\*1 The flowmeter without 3-valve manifold does not allow to dismantle the transmitter from the flowmeter or to make its zero adjustment during operation.

**MAXIMUM FLOW RATE RANGE**

- Flow rates shown in the each table indicate the maximum flow rate range in which the accuracy is guaranteed at each size and at prescribed pressure or density. The minimum flow rate within the range of which the accuracy is guaranteed is 1/10 of the maximum flow rate.
- Maximum flow rate range at measuring air at 20°C and following pressure

Size		Maximum flow rate (m³/h(nor))

\*1 The figures show the mass of flowmeter with JIS 10K RF SO flanges.

## OPTIONAL UNIT

- Multi Functional Converter

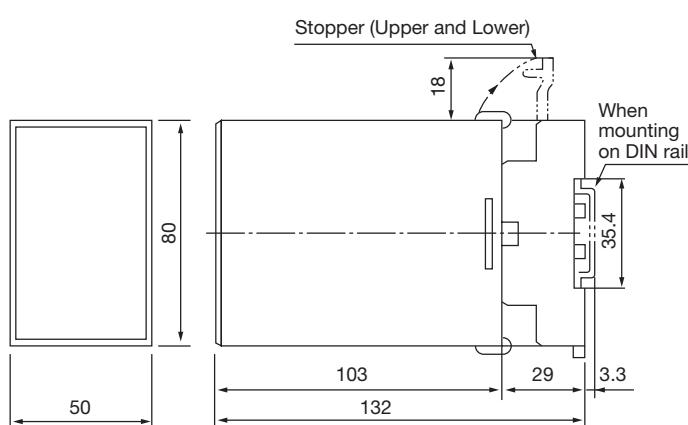

Type EDB500MA

Power supply	: Either 100V / 110V AC $\pm$ 10%, 5VA 50 / 60Hz or 24V DC $\pm$ 10%, 0.12A
Input	: 4-20mA DC from output of Mass V-Cone flowmeter
Outputs	
Output 1	: Flow rate signal 1 to 5 VDC
Output 2	: Pressure signal 1 to 5 VDC
Output 3	: Temperature signal 1 to 5 VDC when a resistance temperature detector is used for gas service.
Conversion accuracy	: $\pm 0.1\%$ F.S. for each output 1, 2 and 3.

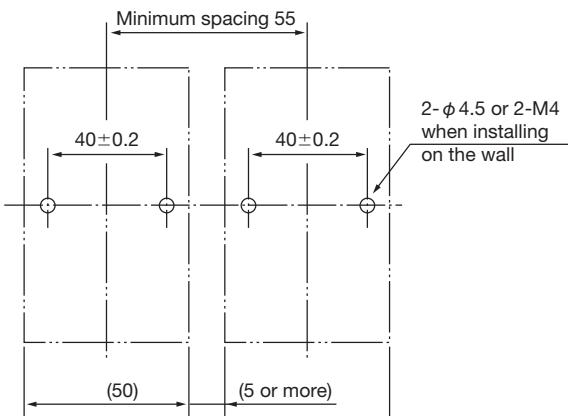

## [DIMENSIONS]

### BODY

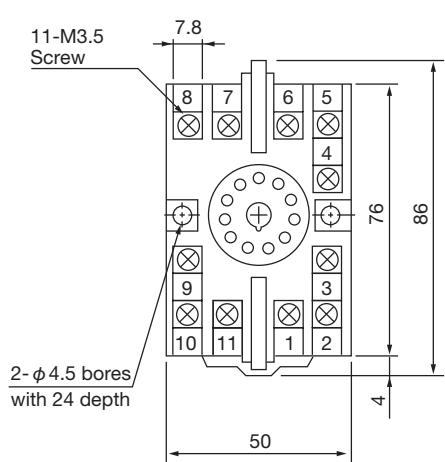

### INSTALLATION METHOD

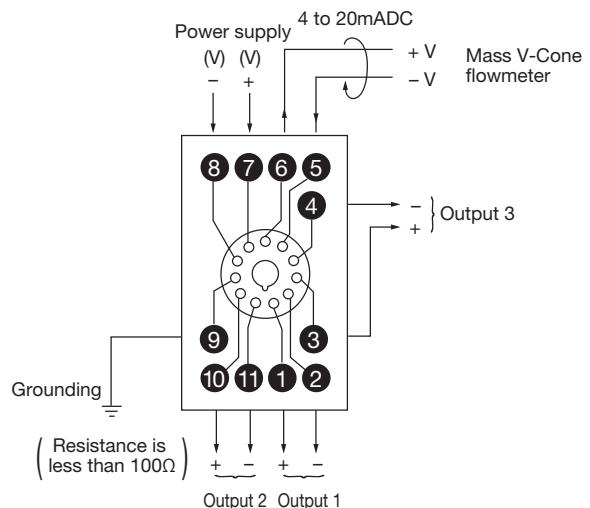

- Space the instruments as shown above.
- Use a DIN rail with nominal 35mm width if required.
- Keep minimum 5mm space between the instruments with an attached spacer between them.
- Install ducts, if required, apart at least 20mm from the top and bottom surfaces of the instrument.

### SOCKET

### [Wiring diagram]

- Resistance temperature detector

Class : Pt100 Class B

Applicable standard : JIS C1604-1997

Materials : Sheath SUS316, Nipple and flange SUS304

Terminal box : Aluminum die casting with silver painting

Wiring connection : G1/2

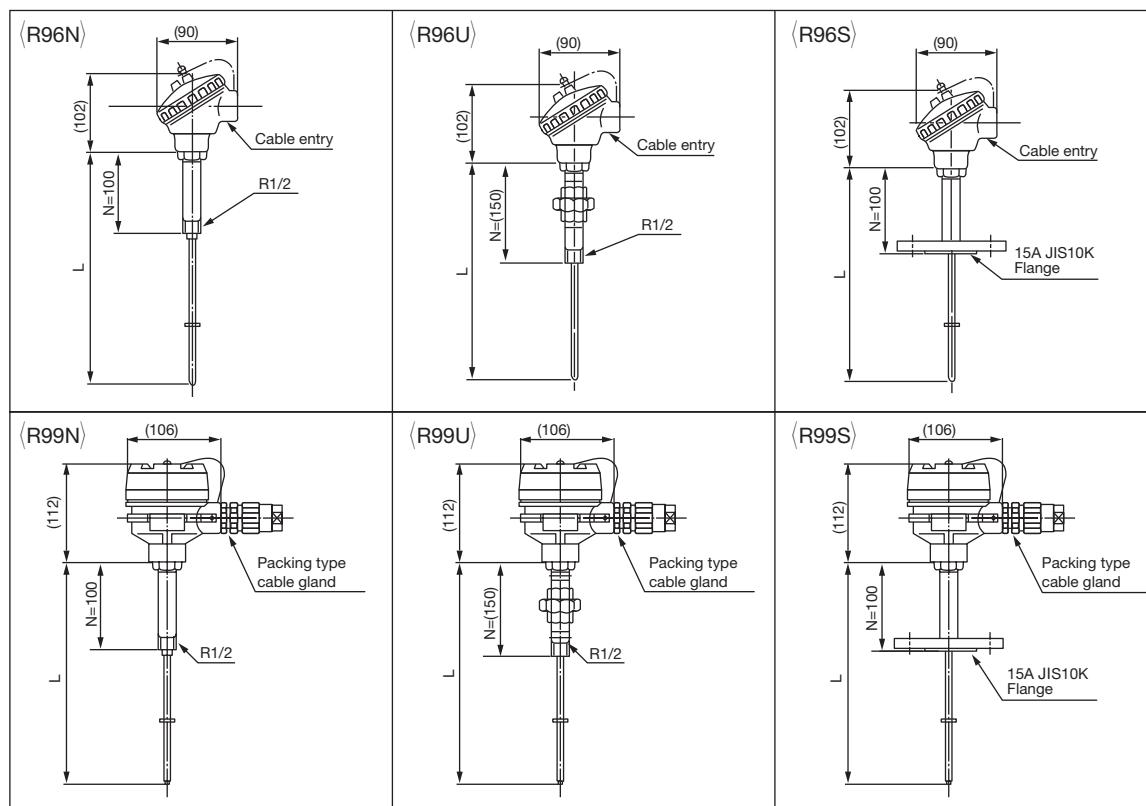

#### MODEL CODE

	*	-		3	100-B		
Construction	R96						General type
	R99						Flameproof enclosure (Exd IIC T6)
Basic model	N-3						Nipple type R1/2 with N=100mm
	U-4						Nipple type R1/2 with an union and N=150 mm
	S-1						15A JIS10K RF flange type with 22 dia. support pipe N=100 mm
Terminal box	EL						General type, made of aluminum die casting (ADC) *1
	GE						Flameproof enclosure, made of aluminum die casting (ADC) *2
Total length "L"		Numerals					"L" dimension in mm
Diameter of sheath	D						3.2 mm diameter
	E						4.8 mm diameter
	F						6.4 mm diameter
	G						8.0 mm diameter
Fixed code		3					3
Measuring range	L						-200 to 100 °C
	M						0 to 350 °C
	H						0 to 500 °C
Fixed code		100-B					100-B
Additional specifications		/J10RF15/A-(L-100)					With 15A JIS10K RF flange *3

\*1 Selectable only when "Construction" code is "R96"

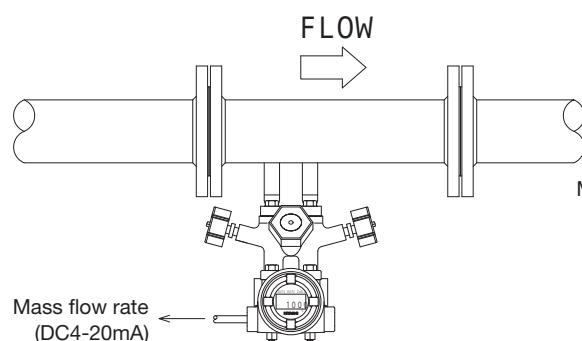

\*3 Specify when "Basic model" code is "S"

\*2 Selectable only when "Construction" code is "R99"

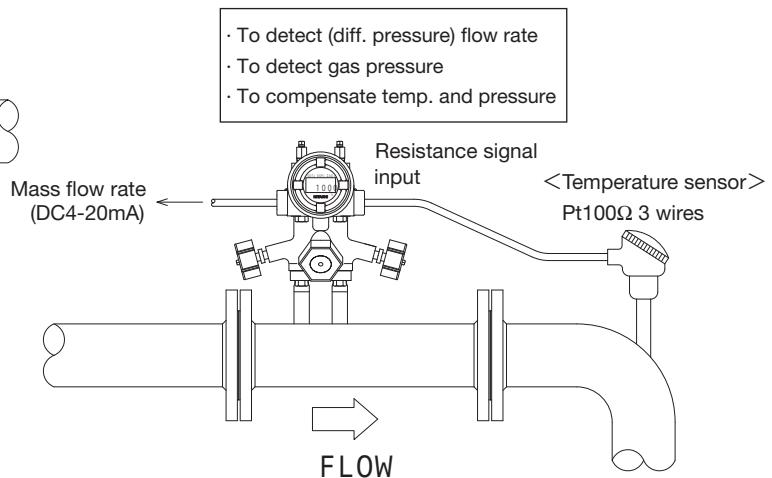

## EXAMPLES OF APPLICATION

- For saturated steam flow measurement

- To detect (diff. pressure) flow rate
- To detect saturated steam pressure
- To compensate density

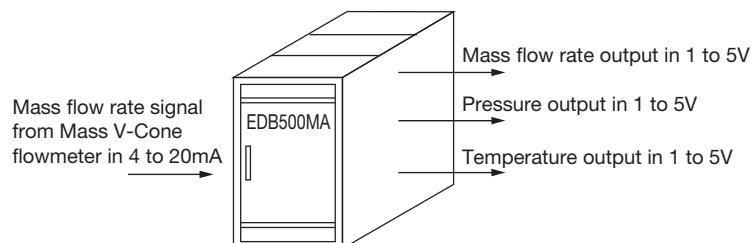

- For gas flow measurement

- To detect (diff. pressure) flow rate
- To detect gas pressure
- To compensate temp. and pressure

- Optional Multi Functional Converter

It outputs flow rate, pressure and temperature independently.

Note: The temperature output is available when the resistance temperature detector is connected to the Mass V-Cone flowmeter for gas services.

\* Specification is subject to change without notice.
